Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) Please make comments both to help the instructor develop the course in the future and to enable some third party appreciate the course’s strengths and weaknesses. (Imagine a reader who may not be willing to wade through all the notes on the other side, but is willing to do more than look at numerical averages.) Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

It found this course really helpful in addressing how to frame a particular topic in order to commence a research project. It does not only addresses technical questions about topic definition, but it actually intends to serve as a self-reflection of the process the researcher goes through at doing research.

Many of the activities seem foreign to those with previous background on traditional research courses that are normally centered on mechanics and methods. However, it is surprisingly refreshing to prove that those activities result in an awareness of the research process that goes beyond techniques. However, the methodological aspect of the course could be improved, maybe introducing a session or two on how to identify proper methods to address the governing questions, or data sources for the same purpose.

Thinking of a governing question from the very beginning may be an effective approach to becoming prepared for 692, 693, & 694. I have found that incorporating past research within other CCT courses to be useful and has saved me time with my full work load.

I believe that having other students to comment and give feedback is important part of the process of research & engagement and listening to other intellectual thoughts made this course stimulating and enjoyable.

The course syllabus although at first seemed huge and confusing - actually was very useful in moving forward in this course. (The enormity of the syllabus at first can scare off turn over students)

Stressing the research & engagement phases A-J and combining with in class writing, discussion and activities tied together well. A major strength for me was previous student work which didn't tell me how to do assignment but helped steer me in right direction. I liked that we were all able to get to know each other by discussing our interests and openly talk about how we are progressing. We all felt comfortable (more than others) but felt safe enough to speak our thoughts.

Class flow & progression was not rushed and feel that I didn't do anything this whole week would have preferred drag back earlier maybe.

This was a very helpful course because it divided the research process up into phases and we'd go in depth into each of the phases. It was like dissecting the research process to understand each of the steps and components so that we have organization and clear-cut goals.

What I appreciated most about this class was the teacher-student and student-student interactions. Because the students were all in the same boat, we talked about our problems, were able to relate to one another and help one another out. Also, if we had obstacles that we were facing (such as the work load, or insufficient time to do our research) we could talk to one another and find solutions/learn from each other.

The teacher was also very good with the comments. He commented like he cared and gave in-depth suggestions that were very helpful. He was thorough.

(Continuation from other side)

Great project for a few CCT students! Use it as an Action Research Project! 😊

The dialogue hours were great. I’d consider doing on the 2nd class to talk about where you’ve been and where you’d like to go. I think it’s much more useful than freewriting.

The feedback from others is excellent and it has helped me grow as a researcher. They show he really cares — many instructors would never give so much. He doesn’t always tell me what I wanted to hear (i.e. OK/NOK) but I learn more through the process.

I really enjoyed this class. Thank you!

Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

Looking back, I realize how much I have grown as a writer during this course. I learned a great deal from the professor, fellow classmates, and the books and techniques I used to improve my writing. I think, most importantly, that I improved as a thinker.

This course is very helpful for writers because the emphasis is on the process of writing, not the product. There isn’t a constant concern with grade and how to get them. This allows a writer to truly focus on improving his thinking/writing ability and feel good about the contribution he has made. I am proud of my efforts in the course regardless of the grade.

Finally, Professor Taylor took a special interest in each of us as students. His comments were always timely, in-depth and highly instructive. He always seemed to really understand where we were referring to as well as all the different phases of that work, this proved that he truly cared about
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

The research phases are hard to remember and can be tedious to work through, but remember that the course is trying to expose you to new “tools” of research; you’re trying things out, not committing to using them just in all your future work. The syllabus and printed materials have lots of information about each phase, but in different places that you have to hunt for; take the time at the beginning of the semester to organize the material in a system that’s usable for yourself so you’re not going crazy later trying to find all the different pieces of information about assignments and phases.
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

I think more activities that could be incorporated into the course may be beneficial and not so overwhelming for the student. It is a very straight line course with no other “learning” director, should I say no other models of learning. Incorporating a student/grad student teacher to co-host the class. Although last semester you did have a guest which I enjoyed someone other than a guest giving a presentation. Have class somewhere else (library) was a good show of change... something of that nature.

As much as I dread passing in work, knowing that it will not nec. a ok/okw or having it in my mind, not because my work wasn’t good BUT it was to be expected, I did finally realize that it was helpful not a hindrance. It has allowed me to go back to the table and re-approach my document from a different perspective. I think this may be useful explaining this more in class or with a peer-mentor.
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) A well-designed class. Workshop format is best for this, perhaps dialogue can be woven in once or twice — say, around mid-sem as a "check-in"/status report/temperature check with participants in class.

Otherwise powerful class. The compilation really helped (hikes, writing pieces, etc.) all the course.

Highly recommended.

The group was highly supportive.

A lot of fun — the camaraderie really helped "ease the pain" on many difficult leads.
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) One thing that was helpful within this course was having constant feedback from peers. Also having a support group of students with similar topics was very helpful and a different approach that made the class even better. This was definitely a strength.

One weakness of the class is that there are so many assignments during the research process and I feel like I have to rush through things as times feels to turn something in. If there was more time between assignments then I feel like I would have been more thorough in some of my coursework.
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) This course provides the foundation on which to build a thesis or final project. I had some reservation in the beginning. The syllabus was overwhelming. But when I organized it into a large binder, things became much clearer. It’s all about staying focused and handling assignments in time. Also, Peter’s comments are helpful in moving me along with the process of research & writing. One thing to keep in mind is it is a work in progress. One step leads to the next step, allowing us to dig deep despair to find solutions or problems.

I enjoyed sharing my work with my peers. The check-ins were helpful. It is nice to see how everyone else is doing. I provide support & encouragement to each other. It’s like building a network of supports.

A lot of time, effort, and effort went into my topic. I spent many hours doing research before class. I have a ton of notes and great information. Read books. I wish I had more time to digest all the articles. Hopefully, to be used in my future courses.
Processes of Research & Engagement, CCT692

Part II

Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) Please make comments both to help the instructor develop the course in the future and to enable some third party appreciate the course’s strengths and weaknesses. Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

This course offers a plethora of opportunities for advancement and growth if a prospective student is willing to invest the time and energy to receive and retain information relevant to life and career through diverse, constructive methods.

A course component that could use strengthening is the applicability of required reading to class participation/exercises. More activities initiated by the changing of date and phase (chronologically) would be better suited to amend a flexible due-date schedule if they were begun in class. Reading Pair-Share time could be consolidated to accomplish this.
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) Please make comments both to help the instructor develop the course in the future and to enable some third party appreciate the course’s strengths and weaknesses. Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

I am a student in the Teacher Education program and this was my first CRT course. Initially I was a bit startled by the format of this class as I am accustomed to texts and assignments in a more structured context such as the methods courses. While I found a personal tendency to fall behind and miss deadlines, I did benefit tremendously through my personal engagement in the research process. In a way, I learned by doing and grew professionally by exploring each phase of R+E.

In terms of the progression of the course, I feel I did twice as much work after the Work in Progress presentation. It forced me to open up my thinking and ideas to classmates and motivated me to keep up with the assignments. The latter checking weren’t very helpful though—because I did not dedicate sufficient time to sharing my writing with classmates for their feedback. I wish that the draft-like the Work in Progress presentation, would have pushed me to the next phase—the final report. I feel that one more week would have been helpful to receive this feedback. Classroom activities were effective but only if you kept up with each phase. I think it’s helpful upfront to understand the personal discipline that is critical to really getting 100% return on this R+P Process.
Write out neatly a synthetic statement (1 or 2 paragraphs) evaluating this course. (You might build on/build in your comments from the other side.) Please make comments both to help the instructor develop the course in the future and to enable some third party appreciate the course's strengths and weaknesses. (Imagine a reader who may not be willing to wade through all the notes on the other side, but is willing to do more than look at numerical averages.) Among other things you might comment on the overall content and progression of classes, the phases of research & engagement, and the in-class activities.

Overall, I thought this course was very beneficial to helping me evolve as a researcher. I had the opportunity to both form & develop my own ideas around each of the models and then modify how I can utilize those models in alternate ways. I do feel that the progression of the course allowed me to stay on schedule w/ assignments & also my own development process.

I also appreciated the interplay/deliberation & working in groups to connect with others w/ peers & also peers. For future students, I think having the opportunity for more reflection, either in class or as part of a practitioners journal would benefit the process as well.

The course’s greatest strength is its focus on the process and its student-controlled, collaborative, and dynamic nature. As I stated earlier, though, I think more formal reflection would help develop the researcher as well.
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

I feel that a primary goal for myself this semester was to work through, identify, reflect and formulate a plan or mental model that would help me to organize and reflect on my overall process. I feel that in many ways I have met that goal. If I were to participate in this course again I would have formulated a stronger research base/strategy from the beginning.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

In order for this class to be stimulating and productive, participants must have ownership of the process. As a participant, you must find your niche within the group and share yourself with others as much as you share yourself.

Even though this is a course in which you can search what you need to search, the connections were almost more than I could imagine.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

The course met my expectations. I feel I am a more organized and thoughtful person. I do appreciate how much effort was included in the time and I do feel, however, that a process like the group could be improved. I feel utilized throughout the semester, not solely at the end. I would recommend the course highly to prospective students.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. If you are a CCT student, you should integrate perspectives from your previous CCT courses and will end up well prepared for—or well underway in—your synthesis project.

The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

I do feel we are offered models of thought through the course, models through our own interests and ideas—there is room for meaningful participation. I have wondered about the lack of an essay format, perhaps a journal that could map...
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

   A significant personal obstacle was keeping up with assignments. I work full time and took another class so my time was limited at times - but that's really an excuse. Narrowing my research and focus was really part of the CT process - if I had to change any component - I would have picked a narrower particular.

   What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

   I loved the workshop format - especially the collegiality and shared engagement in research. I loved giving feedback and receiving it. I'm now more comfortable in my own research ability (speaking to part I). I'd recommend this course to a student with interest in research that can benefit their engagement (RTE) personal or professional goals.

   Compared to another course I'm taking, I found that this (personally) needed a little more structure. I need deadlines that aren't flexible in some cases at least as a motivator. For example, the presentation might have pushed me further along in my RTE work. Preparing for the presentation reenergized me. My attitude is that I had too much feedback opportunity on my writing - it's now the end of the course.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change throughout the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

   In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. If you are a CCT student, you should integrate perspectives from your previous CCT courses and will end up well prepared for—or well underway in—your synthesis project.

The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

All goals were addressed and met in this class. I am not a CCT student so I did not have grounding in CT theory/approaches/foundation. I found that I took time to learn about CT in my research (both out of pure interest and relevance) and I now hope to take another CT course because feedback from classmates.
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

   My personal goals were not achieved because I did not have any outlined nor the plan of action to meet them. In a second attempt at this class I would have met the minimal requirement sooner. Personal obstacles were time management and research-content manifestation and synthesis.

   What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change throughout the semester? How do you think the course could be improved? What was special about this course (positive & negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

   My level of consideration for class participation content & assignments elevated upon the realization that I had reneged on most of my responsibilities to meet very flexible due dates. The word's species is generic and imprecise when used to describe the attributes of attending such a course. It is unique in its approach to learning and refreshing in its ability to.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

   In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

   I felt like my research topic had alot of great information. I would say my goals were met. What made the course successful was being able to purchase the syllabus. I must admit, feeling a bit overwhelmed by the syllabus. But once I was able to organize the booklet, the topics were easier. Being organized on time with assignments really helped. I had to keep myself focused.

   What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

   The willing to share your thoughts & concerns with peers. We can all learn from one another. I really enjoyed the check in time with peers to see problems or solutions they had. Pick a topic you love because it is the foundation on which to build your work.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

   I really enjoyed this course. I felt like it helped me to improve my library research writing styles. Peter is always available by email or office visit to answer my questions or explain things I needed. The three OIT courses have been great. That's why I keep coming back.

   My recommendation to prospective students would be organize in assignments done on time. Effective time management.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

   In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work.    The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

   The syllabus does much what went on in class. There was plenty of practice time for presentations (work in progress) , narrative outline, and refine draft. It is great to share written work with peers. They offer great feedback. I was a little reluctant if this is the beginning. But, now see this as very important as part of my personal growth & development as a reflective writer.
Part 1 -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?
   - Yes, in all, I’m proud of myself because I’ve done very well on the assignments and I thought the course would be challenging to the point where I could not be proficient.
   - I would put more into research if I could do all over/maybe pick a new topic.
   - The major obstacle for me is learning how to just take the time out during my busy week and write.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?
   - The group involvement has been stimulating.
   - I would tell students to be very organized and to turn something in always no matter how sketchy (for feedback)

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?
   - The course met my expectations by being a challenge.
   - I actually started to appreciate something I was learning about research, so my attitude toward writing evolved.
   - Simply syllables would be an improvement.
   - The special aspect about the course is getting to know your classmates better working in a comfortable atmosphere.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. If you are a CCT student, you should integrate perspectives from your previous CCT courses and will end up well prepared for—or well underway in—your synthesis project.

The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

   - The goals were met by the class outline following exactly what this description of the class is.
   - Goals can be better met if students had a little bit more time to think of a topic of interest before starting the course work.

Processes of Research & Engagement, CCT692

Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course? The 3rd time may be the charm. I felt as if I gained more knowledge of the ways of research & engagement. The ability to gather data and quantify it. Put information together so that it flows consistently. I am more organized and feel that I have the skills essential enough to go forward.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this? I wish that this course was more “group” oriented. To quote an article what was discussed in dialogue “it is beneficial working with those who have projects similar to your own. Try to get to know the other students in class so that you can build a some type of support network... if you are feeling lost in the content...”

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

I know what this course entailed since I had to repeat it but it did work wonders on my ability to try & dig deeper in finding answers to some of my underlying questions in my topic. I would like to see the course a little more hands-on and “team” oriented. Have a group or partner the entire semester.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. If you are a CCT student, you should integrate perspectives from your previous CCT courses and will end up well prepared for—or well underway in—your synthesis project.

The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

I still think that you must have some form of knowledge about this course prior to taking it. It’s all about organization which is beneficial in completing a quality piece of work for your synthesis project.

Course evaluation

Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?
   a) I wanted to prepare myself to delve into my synthesis project, and this course has helped me on that.
   b) I would keep better track of my checklist and hand in dates.
   c) I had a really hard time working with and keeping track of the research phases.

   What have you learned about making a workshop format class stimulating and productive?
   a) Working with others outside of class helps you learn more about other people's project and therefore helps you support their work.
   b) Form study groups to meet outside of class sessions.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

   Although there were a lot of familiar faces in this class, there were also some new students I hadn't worked with/ talked to before.

   I had a hard time working with the linear process of the research phases, especially as my governing question evolved and changed.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

   In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

   1. It definitely prepared me for my synthesis, but I don't feel that it's done much to help me in this sentence... it's helped me systematically address an issue in other ways.

Course evaluation

Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course? I think I did achieve my personal goals.

I think, if I were taking the course again, that I would make greater use of the tools recommended. I tend to underestimate tools, and this is something that I hope to change. For example, I wish that I had relied more on my research notebook more.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this? I have learned that I can be more helpful to others if I really open up and be as honest as I can be about what I am experiencing as a writer. I would recommend that others do the same and learn to give and receive support.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students? The course met my expectations. I was surprised at how suggestive the environment was. I thought it would be much more intense. I think once I relaxed and learned to collaborate and support others, I got more out of the course. I think the course is fine the way it is. What was special was how open and honest everyone was and how much time they took to ensure that we were clear on concepts.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

I think the goals were expressed well
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course? I believe I did achieve my goals, but not necessarily those that I set out to accomplish. If I were to start the course again, I would have used some of the suggestions discussed in today’s dialogue session (which was great). For example, I would have kept a journal for all ‘aha’ moments.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

I’d tell students not to worry about getting it “right” the first time. In the first class, I felt a lot of pressure to pick a topic—turns out, I didn’t even pursue the topic I spoke of in the first class. I’d say go with the flow and be sure to communicate with the instructor and seek feedback on an ongoing basis.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

I was satisfied with the course, overall. It was a lot of work, but sometimes it’s those courses that are the most difficult that we get the most out of. As far as courseware, I didn’t find some of the tools processor productive (e.g., freewriting, direct writing). I found them to be somewhat contrived & others however were useful—like reverse outlining. You have to try them to know!

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. I really think the syllabus needs to be consolidated. It’s much too dense. It’s evident, however, that a lot of work and energy has gone into it—and it is packed with good information—it’s just that it’s overwhelming. A good beginning would be to construct a very simple table of contents (I know this is hard, but it needs}

Course evaluation

Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

   This course has helped me write a good project proposal for future lab work.
   I would have taken this course earlier and done more research and come up with a bigger annotated bibliography and final paper because each of our topics have so much depth. My coursework has been my major obstacle and external issues. What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

   Talk more, interact more, get more people to peer edit your paper and peer edit other people's papers to get a sense of happenings in the class.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

   This course was very helpful in identifying the steps of research and helping me follow a proper order and be organized.

   It would be great if they had this same course for science students for formulating scientific theses.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

   This course really met all these goals. We should interact more, have more group activities and classroom discussions because we all relate to one another more than we know.

Course evaluation

Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course? Did I meet these goals? If I were to do this course again, I would be more active in realizing phases and what it meant before I proceeded all the time.

Personal obstacles - distractions, lack of focus at times, last minute rushing.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

Advice - come to class prepared - know goal of each phase before proceeding - be open to different ways of learning.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

Course met my expectations - very challenging, though attitude at first was 'may need to drop this class' to 'ok, now I get it.' Course showed me a way to research & write for a project in process - each little step had meaning and was vital to total project.

Overall rec - be prepared to work in this class while progressing.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. (The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner.) The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

Goal of effective workshop with introduction + tools to use + develop from were met.

Choosing a topic of interest makes you more personally motivated and focused.
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

   "I find myself work very hard for this class. I feel myself lost, confused, frustrated and stressed too much. I love to write; however, writing for this class is tough. My grammar is horrible!"

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

   "I feel relieved at the end of this class; however, assessment and self evaluate myself keep me thinking a lot... Even the class is end; somehow I don't feel it is end at all. I feel like the "never ending story..." I still worry about my report and so on... I really have no advice for this class because I don't have any advice for myself; how can I advice for someone else?"

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

   "I did not think this course would be this hard. I was lost most of the time. I wasn't too happy during the semester. Most of the time I felt negative about myself. Not understand the work, confused, and not know direction to go. I wish the course can be more direct. Compare to other classes, others is more straightforward. I don't have any recommendation for students — sorry."

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

   In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. Course evaluation

Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

I achieved what I set out for and more, because I decided to just jump in and start working with my students on the reduction of stress techniques. I would write out my goal question the same way but I would create my table of content instead of mapping. I like this form of organization much better.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

My personal obstacles have been time, however, I also would prepare my writing and teaching together with my researching and what I have discovered simultaneously.

I think the most stimulating and productive part of this course has been the feedback that others have seen. I like to see how others think of how they are working on a task. I also learn more by listening. I liked the course because there were where 16 or 17 people to bounce ideas off of. I think the course could be improved by a review of the syllabus. Students can set up an appointment with text ASAP and review. Homework assignments can be without links. B gets overwhelming to check and recheck if I missed any reading of the syllabus. I learned much from this course. I would compare this course with CCT 202 which we.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

Do not waste too much time reading the syllabus. I think of your synthesis from the list class as are.

3. Re-read the course description (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. 1. Start with a self-evaluation: Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

I believe I was able to achieve my personal goals. At the start of the course, I promised myself that I would put as much into the course as I possibly could. In this manner, I felt that I was taking much from the course. If doing the course again I would try to avoid the worrying and comma, the up and down engagement, and determine in advance what work was necessary, as close as possible.

What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

I feel that was very important in this course. I felt that first were many students and background. Christmas the weekly sessions. My advice to past students would be to communicate with each other. Absenteeism was written comments in verbal check-ins. I could foresee would done more of this.

2. General evaluation: How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

Honesty many of us needed their, workshop, account of 50% through out last before. Not having enough paper before I knew my self for an all night class like this to be hard and less. The workload because of the amount of work had been under my estimation and no it is not simply because of my low (n) expectations. The course through support and able to meet needs paper. I participated in communication was...

The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

I would have benefited from more collaboration. I think that's a crucial aspect and that needs to be developed in the end of the course.
Part I -- The primary goal here is to make notes as preparation for Part II, a synthetic statement. Nevertheless, try to be legible because some reviewers might read these as well.

1. **Start with a self-evaluation:** Did you achieve your personal goals? How would you have proceeded differently if you were doing this course again? What have been your major personal obstacles to learning more from this course?

   Not completely. If I was to take the course again, I would spend less time defining my goal. First I thought about a whole dissertation proposal, then I realized it was too much and decided to complete the lit review. My obstacle: my wife needed a lot of attention.

   What have you learned about making a workshop format class stimulating and productive? What would your advice be to prospective students about how to get the most from a course like this?

   I believe that at any workshop, you receive as much as you are willing to give. So my advice would be something along the lines of: do not be afraid to explore techniques and resources you have not encountered before, let yourself go.

2. **General evaluation:** How did the course meet or not meet your expectations? How did your attitude to doing the course change through the semester? How do you think the course could be improved? What was special about this course (+positive & -negative)? How does it compare with other courses? What would be your overall recommendation to prospective students?

   The course surprised me as I am/was used to a narrower definition of research, in which it might scan a standardized project: Rationale - Lit Review - methodology - implementation and Findings, discussion and conclusion. I found it specially useful the emphasis on writing, perhaps this should even be strengthened. However, from my perspective, the process of research should be emphasized at some point too. My overall recommendation: come, take this course. It will help you to write and to write well.

3. **Re-read the course description** (from the syllabus). Comment on how well the goals expressed there were met and make general and specific suggestions about how these could be better met.

   In this course you identify a current social or educational issue that concerns you—you want to know more about it, advocate a change, design a curriculum unit or a workshop, and so on. You work through the different phases of research and engaging others on that issue—from envisioning a manageable project to communicating your findings and plans for further work. If you are a CCT student, you should integrate perspectives from your previous CCT courses and will end up well prepared for—or well underway in—your synthesis project.

   The classes run as workshops, in which you are introduced to and then practice using tools for research, communicating, and developing as a reflective practitioner. The class activities and course as a whole provide models for guiding your own students or supervisees in systematically addressing issues that concern them.

   I see how the course has met its goals of helping formulate a given social or educational issue. What is not so clear to me is if the empirical approach has been covered. Maybe there should be a class on methodology, quantitative vs. qualitative, what type of data is necessary/less sensitive/more? I'm not sure what one should do about this, but I think we need a clearer indication of where and how to find.
