10	Tan,Yun	Temp. & Pressure of ideal gas	6 coeffs; 3rd; sine
	Verano,Bethy		
	Woodford,Allison R	absent	
	Zhang,JiaQuan		absent

Suggested items to write in the Engin 103 logbook:

1) At the conclusion of Project 1 on data modeling, what do you think about the models your team presented for the given data set: what are the steps to follow to get the best model? What is the limit? How to choose "good guesses" for the parameters such that solver can achieve a good model? What happens if your curve lays exactly on the data set?

2) Given your experiences working in team so far, indicate in high to low order of importance, three personal skills to be a good team player. Repeat the same for a member to be a good leader, and explain if there is any new discovery with respect to what you wrote in your logbook at the beginning of the semester regarding this same topic.
